

SwimLife Swim Spas Start Up Guide

Step 1

Fill your SwimLife Swim Spa through the filter skimmer located on either side.

Tie Zorbie to an air control or the filter grate and let it float on the top of the water. A Zorbie will cut down on foam, reduce odours and increase water clarity. Do not squeeze or use as a sponge!

Step 2

Test your water for pH and total alkalinity using the Aqua Check test strips provided. Adjust your water accordingly. When balancing, always adjust alkalinity before pH.

Make sure pump 1 is running in high speed when adding chemicals

pH 7.2 - 7.8

Alkalinity 100 – 140PPM

- Raise alkalinity if required using Jacuzzi Alka Up
 - 6 caps of Jacuzzi Alka Up will raise alkalinity 10ppm
- Lower Alkalinity if required using Jacuzzi pH Down
 - 6 caps of Jacuzzi pH Down will lower alkalinity 10ppm (For example, if Alkalinity is 180ppm you will need to add 24 caps of Jacuzzi pH Down to reach 140ppm)

Add no more than 12 caps of Jacuzzi pH Down or Jacuzzi Alka Up in a 20 minute period

- Adjust pH only if necessary
 - 6 caps of Jacuzzi pH Down will lower the pH one colour shade on the test strip bottle

Step 3

Add 6 tablespoons or 90 grams of Jacuzzi Chlorine Granules and run pump 1 on high speed for a 20 minute cycle with the cover open.

Step 4

Once the proper levels are obtained and your swim spa has exceeded 70 degrees in temperature add 4 bottles of Spa Solution and run pump 1 on high speed for a 20 minute cycle with the cover open.

Maintaining Your SwimLife Swim Spa

AFTER EACH USE **TURN AIR VALVES OFF!**

Add 6 tablespoons of Jacuzzi Spa Shock **after** each use and run pump 1 on high speed for a 20 minute cycle with the cover open.

- Objective is to maintain 1 – 3ppm chlorine read at all times.
- For heavier use add 6 tablespoons of Jacuzzi Chlorine Granules in addition to adding Jacuzzi Spa Shock.

WEEKLY

(Please visit your local Jacuzzi Hot Tubs Ontario location for Free Digital Water Analysis)

Step 1

Test your pH and alkalinity levels by using the Aqua Check test strips provided. Adjust water accordingly. When balancing, always adjust Alkalinity before pH.

See Step 2 from the Start Up Guide for further instructions

Step 2

Shock your swim spa by adding 6 tablespoons of Jacuzzi Spa Shock and run pump 1 on high speed for a 20 minute cycle with the cover open.

Step 3

Add 6 tablespoons or 90 grams of Jacuzzi Chlorine Granules and run pump 1 on high speed for a 20 minute cycle with the cover open.

BI-WEEKLY

Clean your filters by rinsing them with water using a Filter Flosser.

EVERY 2 MONTHS

- Replace your Zorbie
- Thoroughly clean your filters using Aqua Magic Cartridge Cleaner and then rinsing them with water using a Filter Flosser

MAINTENANCE TIPS

Cloudy Water

Balance pH and Alkalinity if required. If no Chlorine is present on test strip shock using 6 tablespoons of Jacuzzi Chlorine Granules.

Add 12 caps of Jacuzzi Spa Clear and let the Swim Spa circulate with air controls in the off position for a 20 minute pump cycle.

Foamy Water

Make sure bathing suits are rinsed in warm water to remove any soap residue.

Ensure there is adequate Chlorine in your Swim Spa.

Use 6 oz of Jacuzzi Defoamer.
